

City Perspectives

PURPOSE:

To create a shared perspective in order to gain alignment within a team.

GOAL:

To discover how a series of pictures relate to one another and then to quickly align the pictures, face up, in their proper sequential order.

RULES:

1. The problem begins with all of the pictures face down and surrounded by a rope boundary. Pictures must stay within the boundary. The rope boundary may not be moved.
2. Only one person may enter the boundary at a time. Only the person inside of the boundary may manipulate the pictures.
3. A person can only stay inside the roped boundary for as long as they can hold their breath. Once their turn is finished, they can no longer enter the rope boundary or move the pictures until everyone else has had a turn.
4. No one in the group is allowed to talk or use vocal sounds while someone is inside of the boundary. If anyone breaks this rule, then the person handling the pictures loses the rest of that turn.
5. You have 20 minutes to complete this task. Time begins now.

VARIATION:

Everyone has only *ONE* opportunity to enter the circle.
